

Advanced Technology Consulting (ATC)

For The Business Minded

ATC's innovative practice and suite of services help leading, mid-size and enterprise organizations create business value and differentiation from their voice, data, cloud and security services.

As an independent IT and telecom consulting firm, ATC removes the business complexities of researching, comparing, procuring, implementing and managing telecommunications and cloud services. ATC's team of technology professionals leverages an extensive network of 250+ technology providers and a proven process to deliver deep segment-specific expertise.

Over the last several years there has been a transformational convergence of IT and telecom. ATC has been at the forefront of this convergence, assisting clients with VoIP, cloud migration, voice and data networks, unified communications, bandwidth, business continuity and back up, and security .

VoIP

Unified communications help you serve your customers better with mobile, flexible solutions that allow you to do business anywhere anytime. Hosted VoIP provides cloud-driven benefits and a full range of feature sets.

CLOUD

Cloud services and technologies are providing significant benefits to companies of all sizes, including cost efficiency and scalability. The cloud model aligns quite well with today's on demand, pay-as-you-go market.

BANDWIDTH

The rise in cloud computing, bandwidth-intensive applications, and heavy media requires bigger pipes—larger, dedicated circuits (usually fiber) providing more bandwidth and hence, more reliable connectivity.

SECURITY

The cyber security provider landscape is complex. There are also countless threat actors that have the same equipment and services as you... in a lab! Take a multi-layered approach to security to protect your business.

“As a partner, ATC provides real, practical solutions to IT and telecom problems facing companies.”
